Intent: BookHotel

An intent represents an action that fulfills a user's request. Intents can have arguments called slots that represent variable information.

Conversation flow

Intent details

Intent name

BookHotel

Maximum 100 characters. Valid characters: A-Z, a-z, 0-9, -, _

Description - optional

Save intent

The diagram illustrates the logic flow for the 'BookHotel' intent. It begins with a 'Start' node (green) with the message 'I want to book a hotel...' and a response 'Okay, I can help you...'. This leads to a 'Code hook' node (orange) labeled 'Invoke Lambda'. Following this, there are three sequential 'Get slot value' nodes (purple): 'CheckInDate' (prompt: 'When would you like...'), 'CheckOutDate' (prompt: 'When would you like...'), and 'RoomType' (prompt: 'Which room type would you like...'). Each of these nodes has 'Success' and 'Failure' paths. The 'Success' paths lead to a 'Confirmation' node (green) with the message 'Okay, I have found for...' and a 'No' path. The 'Failure' paths from the slot nodes lead to a 'Go to intent' node (yellow) labeled 'FallbackIntent'. The 'Confirmation' node has a 'Yes' path leading to a 'Fulfillment' node (pink) labeled 'Invoke Lambda', and an 'Error' path leading to the 'Go to intent' node. The 'Fulfillment' node has 'Success', 'Failure', and 'Timeout' paths. The 'Success' path leads to an 'End conversation' node (red), while the 'Failure' and 'Timeout' paths lead to the 'Go to intent' node. A 'Closing response' node (blue) with the message 'No response' is also shown, which can be triggered from the 'Go to intent' node.

Check with your bank. Your bank couldn't authorize this payment method.

Try again.

I've tried multiple debit cards for the subscription but haven't been able to resolve the issue, impacting the completion of the project. Could you please offer guidance on how to address this?
